

Financial Audit Analysis Executive Summary

6.3M transaction analysis | PaySim Dataset

Total Transactions	Total Value	Fraud Count	Fraud Value
6.36M	1.14T	8.21K	12.06bn

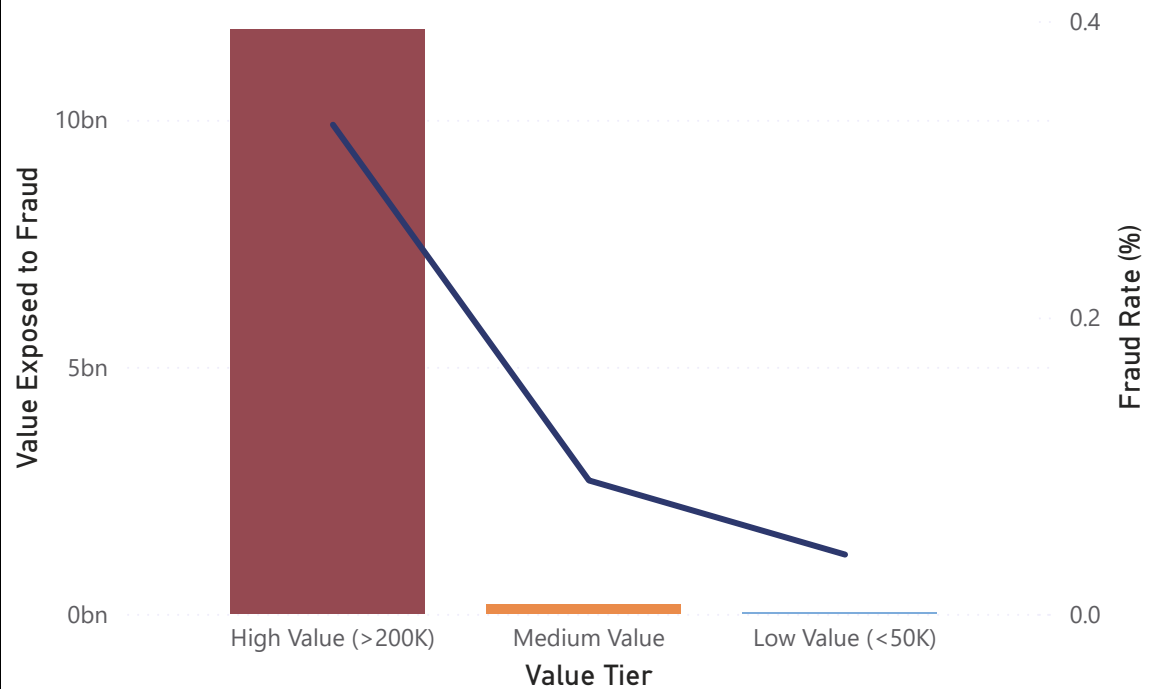

CASH_IN	CASH_OUT	DEBIT	PAYMENT	TRANSFER
---------	----------	-------	---------	----------

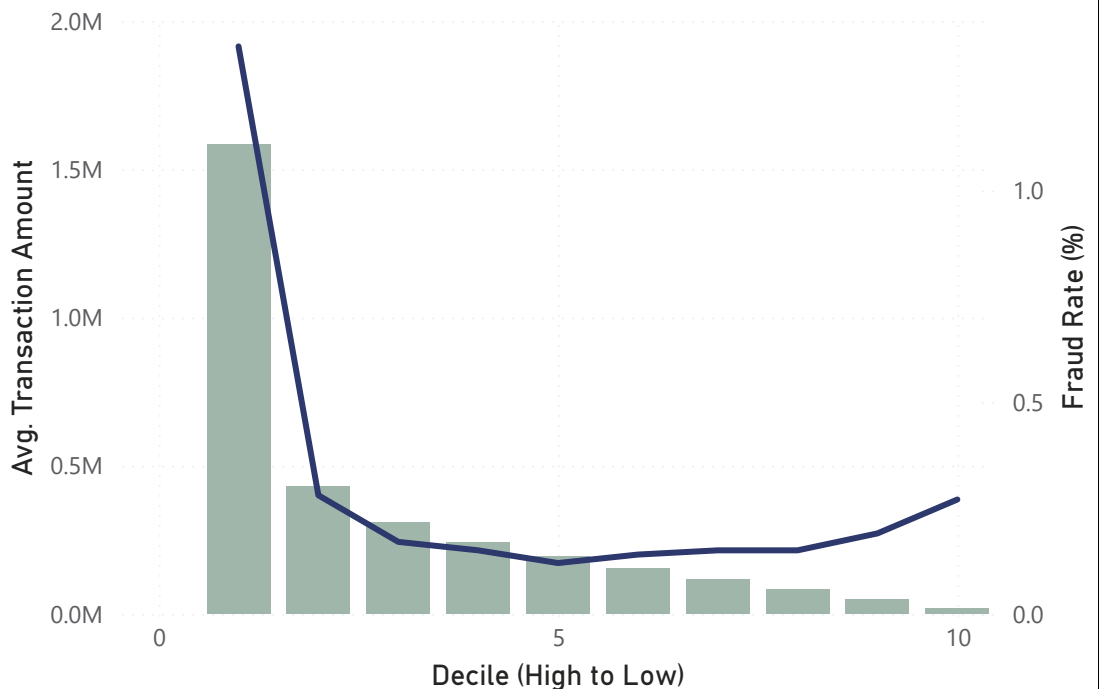

KEY FINDING: 0.13% of transactions account for 1.05% of total value — fraud carries disproportionate financial weight relative to transaction volume.

Financial Audit Analysis Fraud Analysis

Fraud Distribution Based on Value Tier

Fraud Rate Curve

KEY FINDING: Fraud rate follows a U-shape across value deciles — highest at extremes (1.34% in top decile, 0.27% in bottom decile). Fraudsters target both high-value transactions and small test transactions.

Risk Classification by Transaction Type

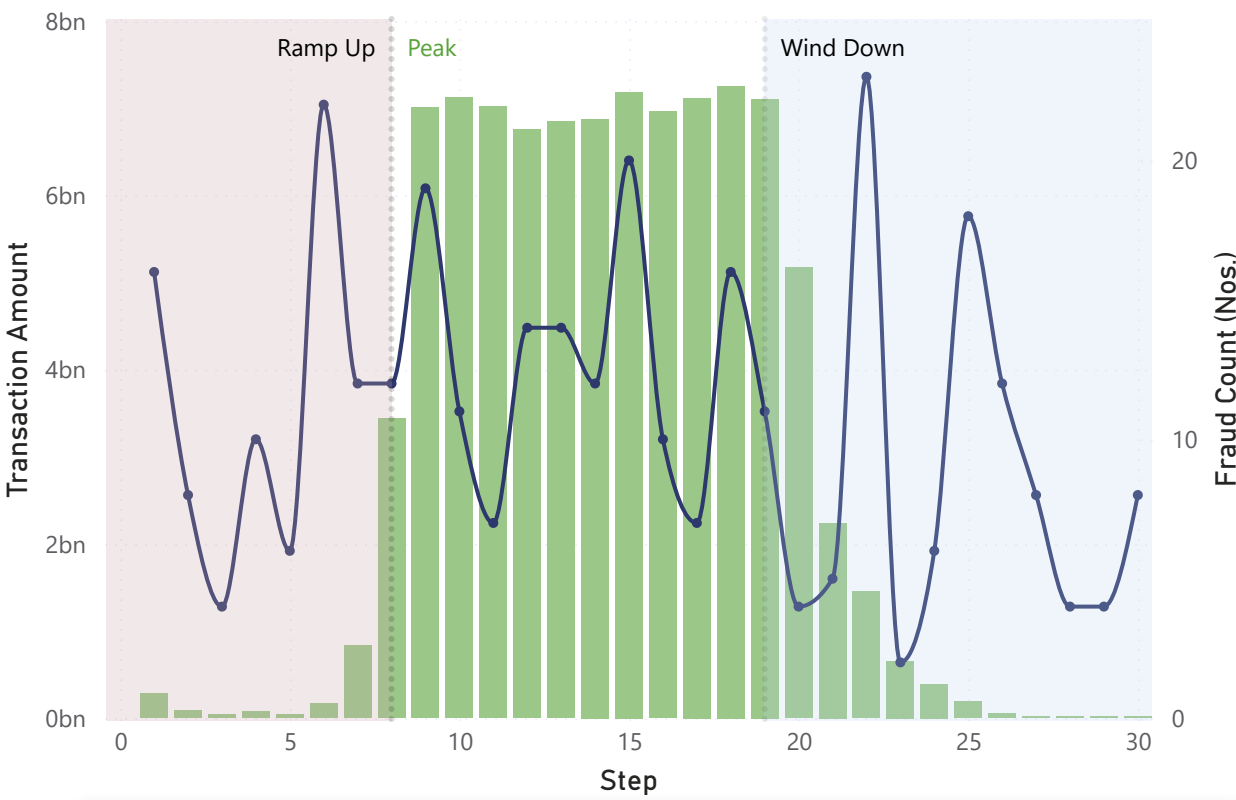

Transaction Type	Risk Rating
TRANSFER	HIGH RISK
CASH_OUT	MEDIUM RISK

Decile Fraud Breakdown

decile	avg_amount	fraud_count	fraud_rate
1	15,84,724.28	3724	1.34
2	4,28,803.94	763	0.28
3	3,08,449.27	474	0.17
4	2,41,556.91	403	0.15
5	1,92,470.84	346	0.12
6	1,52,147.52	379	0.14
7	1,16,388.95	427	0.15
8	83,013.51	415	0.15
9	50,508.41	523	0.19
10	17,296.70	759	0.27

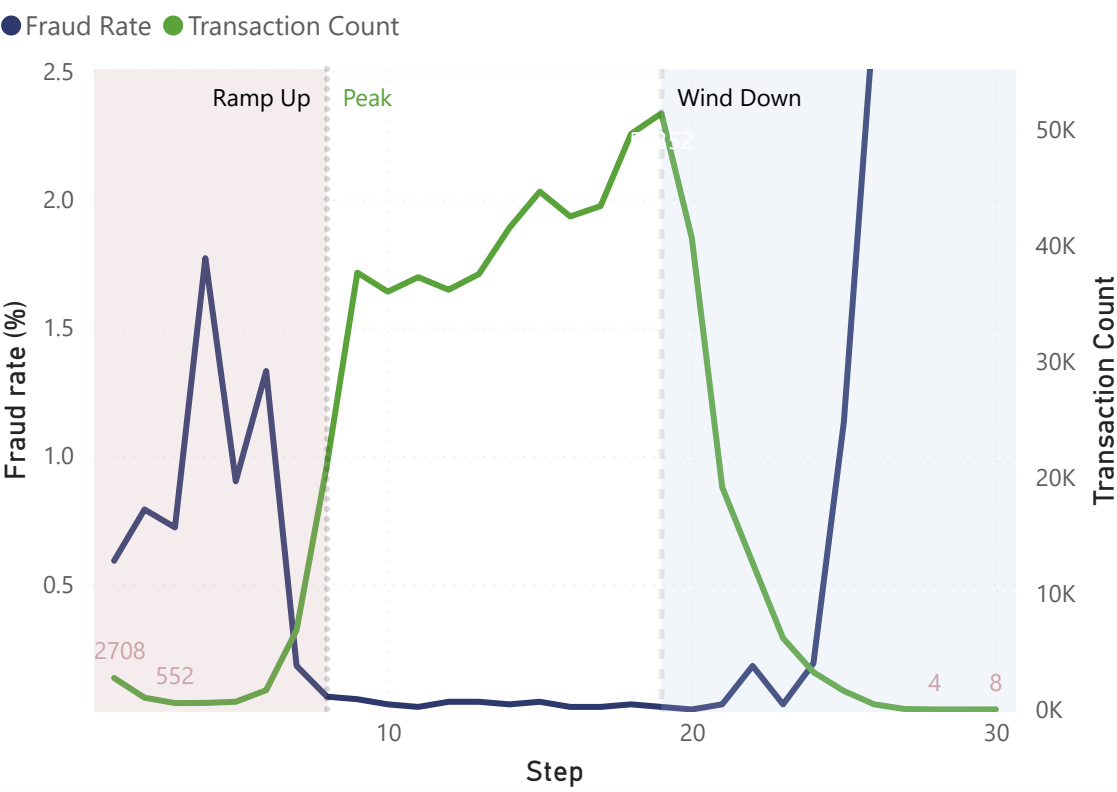

Financial Audit Analysis Trend Analysis

Transaction Volume Over Time

Note: Fraud count per step is naturally volatile due to low absolute counts (4-22 incidents per step). This reflects sporadic, opportunistic fraud behavior rather than a systematic pattern.

Fraud Rate Trend Across Simulation Steps

Note: Fraud rate spike after step 25 reflects extremely low transaction volume (4-8 transactions per step) as simulation winds down — not a genuine fraud surge. Statistically insignificant sample size.

IMMEDIATE ACTION

INVESTIGATE

Note on Immediate Action:

This table excludes 287 accounts that hit the exact 10,000,000 transaction cap -- a distinct hit-and-run pattern of maxing out the system limit in a single transaction. These excluded accounts represent ~7% of all confirmed fraud cases. The accounts shown here (including some in the 9-10M range) reflect the remaining fraud population, which displays more varied amounts and patterns.

Note on Investigate:

"Investigate" accounts are flagged based on reconciliation breaks alone, without confirmed fraud (isFraud = 0). However, dataset-wide analysis found 46% of all TRANSFER and 54% of all CASH_OUT transactions fail reconciliation largely due to unreliable opening/ closing balance fields (see Data Quality Findings). This category should therefore be treated as a candidate list requiring further verification, not confirmed risk.
